Day 5: Pascal's Triangle and the Binomial Theorem

As you expand binomials it becomes more and more tedious to calculate:

$$(x+y)^{0} = 1$$

$$(x+y)^{1} = x+y$$

$$(x+y)^{2} = x^{2} + 2xy + y^{2}$$

$$(x+y)^{3} = x^{3} + 3x^{2}y + 3xy^{2} + y^{3}$$

$$(x+y)^{4} = x^{4} + 4x^{3}y + 6x^{2}y^{2} + 4xy^{3} + y^{4}$$

$$t_{1} \quad t_{2} \quad t_{3} \quad t_{4} \quad t_{5}$$

But if we just look at the coefficients of each term, we can use a pattern:

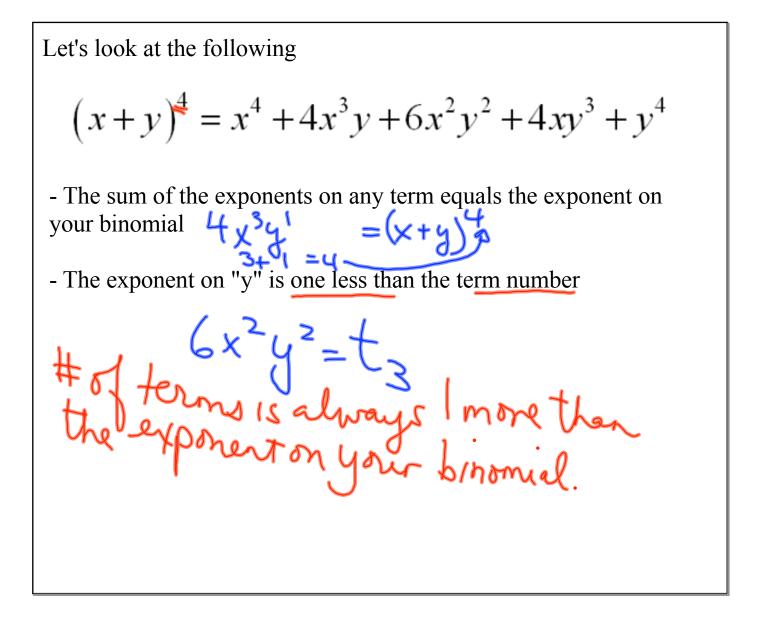

$$(x+y)^{0} = 1$$

$$(x+y)^{1} = 1 1$$

$$(x+y)^{2} = 1 2 1$$

$$(x+y)^{3} = 1 3 3 1$$

$$(x+y)^{4} = 1 4 6 4 1$$
Called Pascal's Triangle

Eg 1) Find the fourth term in the expansion of $(x + y)^{5}$ **L**L a les 0 را بم

It turns out that the coefficients found using Pascal's Triangle can also be generated using combinations:

$$(x+y)^{0} = \begin{array}{c} & & & & \\ & & & \\ & & (x+y)^{1} = \end{array} \begin{array}{c} & & & \\ & & 1 & C_{0} & & 1 \\ & & & & \\ & & & 1 & C_{0} & & 1 \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ &$$

$$(x+y)^{n} =_{n} C_{0}x^{n} +_{n} C_{1}x^{n-1}y +_{n} C_{2}x^{n-2}y^{2} + \dots_{n} C_{n}y^{n}$$

This theorem can be used to expand any binomial (without even knowing further terms of Pascal's triangle). If you are using any other terms than x and y, simply replace them in the formula.

Eg 2) Find the 4th term in $(x+y)^9$ Coefficient: $qC_3 = 84$ Venable 84 × 6 y 3 × Eg 3) Determine the 5th term in $(2a-b)^8$ $c: gC_4 = 70$ $v: x^4y^4$ $10(aa)^4$ +(3x) t_3 $7^{C}_{2}(3x)^{2}$ $(243x^{5})$ 20412 Eg 4) Write the expansion of $(2-3x)^4$ $4^{C_{O}} \times 4^{4} y^{\circ} + 4^{C_{1}} \times 3^{3} y' + 4^{C_{2}} \times y^{2} + 4^{C_{3}} \times y^{3}$ $1(a)^{4} + 4(a)^{3} (-3x) + 6(2)^{2} (-3x)^{2} + 4^{C_{4}} y^{4}$ $\frac{4(2)(-3x)^{3}+1(-3x)^{4}}{16-96x+216x^{2}-216x^{3}+81x^{4}}$
